Data Manipulation

- Do the following task given the dataset: students.csv
  - Load the dataset
  - Display first five rows
  - Find number of rows and columns
  - Select name and GPA
  - Find students with GPA ≥ 3.5
  - Sort students by GPA
  - Find average GPA by major

From raw data to useful info

- Given the datasets: students.csv and scores.csv
  - Load both files
  - Check missing values
  - Fill or remove missing data appropriately
  - Merge the two datasets
  - Calculate each student's average score
  - Find the top 5 students
  - Compute average score by major
